IBM enrichit son offre logicielle de stockage pour accompagner les entreprises dans le Cloud Hybride

IBM Spectrum Protect se dote d'un nouveau système de sauvegarde Cloud et aide les entreprises à réduire leurs coûts d'infrastructure de sauvegarde

IBM Spectrum Protect se dote d'un nouveau système de sauvegarde Cloud et aide les entreprises à réduire leurs coûts d'infrastructure de sauvegarde

Paris - 26 août 2015: IBM annonce aujourd'hui que deux offres logicielles d'IBM Spectrum Storage se dotent de nouvelles caractéristiques, résultat de l'investissement réalisé par la compagnie dans le domaine du Software Defined Storage. Au cours des six derniers mois, plus de mille clients ont choisi les produits du portefeuille Spectrum Storage d'IBM pour leurs besoins de stockage de données.

IBM a été par ailleurs reconnu comme « Leader » ces 5 dernières années pour son offre IBM Spectrum Protect par le Gartner Magic Quadrant for Enterprise Backup Software and Integrated Appliances.

IBM Expands Storage Software to Help Companies Meet Hybrid Cloud Requirements

IBM Spectrum Protect adds new cloud backup; helps companies reduce backup infrastructure costs

IBM Spectrum Accelerate now available as a service on IBM Cloud

Armonk, N.Y. - 26 Aug 2015: IBM (NYSE: IBM) today announced that it is adding new cloud features to two IBM Spectrum Storage software offerings as part of the company's investment in software defined storage. Over the last six months, more than 1,000 new clients have chosen products from the IBM Spectrum Storage portfolio for their data storage needs.

IBM Spectrum Protect Backs Up More Data in the Cloud

IBM has been recognized as a "Leader" in the Gartner Magic Quadrant for Enterprise Backup Software and Integrated Appliances¹ for five consecutive years for IBM Spectrum Protect. With new features, IBM Spectrum Protect can now help businesses back up data to on-premises object storage or the cloud, without the need for cloud-gateway appliances. IBM Spectrum Protect supports IBM Cloud infrastructure today with a plan to expand the support to other public clouds in future.

A single IBM Spectrum Protect server performs the work of up to 15 CommVault servers.² This means that large enterprises can consolidate backup servers to reduce cost and complexity, while managing data growth from mobile, social and internet of things. Small and medium size businesses (SMBs) can eliminate the need for

additional backup servers, media servers or deduplication appliances. Analysis with beta customers indicate that the enhanced IBM Spectrum Protect software can help clients reduce backup infrastructure costs by up to 50 percent.³

Cloud service provider Tectrade, backs up more than 13,000 systems per day using IBM Spectrum Protect:

"IBM Spectrum Protect offers significant enhancements and richer functionality than many other virtual backup technologies that are available in the market today," said William Bush, technical services manager, Tectrade. "You don't have to run a separate virtualization-only technology to supplement IBM Spectrum Protect, so you get a single comprehensive management and storage experience."

In the fourth quarter of 2015, IBM Spectrum Protect will be offered as an option on the VersaStack solutions jointly developed by IBM and Cisco.

IBM Spectrum Accelerate Brings Hyperscale Storage to the Cloud

IBM Spectrum Accelerate on Cloud provides IBM Spectrum Accelerate as a service to IBM Cloud customers via its SoftLayer infrastructure. It helps companies to deploy block storage on SoftLayer without having to buy new storage hardware or manage a large appliance farm.

"IBM Spectrum Accelerate on Cloud enables us to do off-site copies, snapshots and asynchronous replication of data from our data centers to IBM Cloud from a unified management dashboard," said Juha Kukka, services design manager of cloud service provider Enfo Oyj. "This helps simplify management, reduce administration and lower costs, allowing us to bring efficiency to our clients."

IBM is also enhancing the software-only version of IBM Spectrum Accelerate to reduce costs by consolidating storage and compute resources on the same servers. IBM Spectrum Accelerate is now available with portable licensing across XIV systems, on- premises servers, and cloud environments to offer greater operational flexibility and help support clients as they transform their IT infrastructures to software defined storage.
